Versine Measurement

VMB14

Set of measuring bars for versines by the "Wuppertal method".

The measuring bar set consists of two end bars (± 200 mm) and a middle bar with a scale (± 700 mm).

The front and rear measuring bars have a mounted slider by which a set point is fixed at the chord end. The chord can then be inserted in the groove provided.

The measuring bars are made of aluminium T-section, and have scratch-proof scales imprinted by electrolytic oxidation.
